

## Eurobarrier P Pedestrian Barrier System

Eurobarrier P is a barrier system designed to create safe pedestrian areas but maintain an open plan aspect.

The system is simply bolted to the floor which means that it is quick and easy to install and also demountable. Posts are generally provided at nominally 2.5m centres which can be adjusted to suit the required layout. If additional robustness is required, light and heavy duty options are available.

### Eurobarrier P

- Robust & Durable
- Quick & Easy Construction
- Demountable
- Single and Double Rail Options
- Standard & Non Standard Post Centres and Height Options
- Integral Kick Board (if required)
- Mesh or Solid Steel Filled Sections
- Light and Heavy Duty Options
- Side Impact Capability
- Removable Sections
- Powder Coated or Galvanised

Eurobarrier P can also have sections infilled with mesh or steel and can include an integral kick board if required. Eurobarrier P has the added feature of removable sections, which means that the hand and knee rails can be removed, allowing more direct access to normally, protected areas.

The barrier system is also easily adapted for use in stairwells and mezzanines with or without infill sections please refer to Eurobarrier M for details.
